
MARIA LUBIMOVA

2026

Product UX/UI Designer

About Me

I specialize in designing SaaS platforms, admin panels, and mobile applications with AI integration. My approach is based on balancing user goals, business needs, and technological constraints.

Lead Product Designer

Feb 2025 — Mar 2026

AskBefore

Berlin, Germany (remote) • MedTech startup on blockchain technology B2B2C

Responsible for creating the product from scratch: user and clinical portals, mobile application, key modules of the ecosystem.

- Managed the full cycle from discovery to delivery, developed the product concept, roadmap, and MVP, and brought the product to MLP based on quantitative and qualitative data.
- Implemented AI features in the product: assessed relevance for user scenarios, validated hypotheses, and measured impact on key success metrics.
- In a B2B2C environment, continuously adapted the value proposition and functionality to strategic changes (including the CEO's request to enhance the 'clinical' part): balanced the needs of partner clinics and users considering legal/GDPR.
- Prioritized and improved MLP based on quantitative metrics (Smartlook: flow, errors, drop-off, behavior) and qualitative metrics (interviews, JTBD/pains, usability).
- Translated requirements into interactive prototypes and specifications, ensuring transparent handoff to development and legal (including through BPMN for complex scenarios).
- Prepared the product for market launch: aligned user journey, onboarding, design system, and critical edge cases.

Product UX/UI Designer

Mar 2024 — Jun 2025

Dessst

Moscow, Russia • EdTech startup

Adapted the learning platform to meet student needs: from research to launch and development.

- Conducted discovery (interviews/feedback collection), identified student needs and pains, developed product hypotheses and prioritization.

Portfolio
lubimova.site

- Designed key interfaces from scratch: student personal account and content management admin panel.
- Visualized user scenarios and learning tracks (diagrams/flows), modeling 'commercial' work tasks for practice.
- Validated solutions with the founder and stakeholders, synchronized with developers, prepared prototypes/specifications, and supported implementation.
- Maintained a unified UI/UX and design system for the platform to accelerate development and ensure interface consistency.
- After the platform launch, became a course curator: improved the program based on feedback, supported students, and ensured material quality.

Product Designer

Jun 2023 — Feb 2024

Metropolitan Premium Properties

Dubai, UAE • Real estate agency

- Created digital products for development projects and real estate in the UAE (landing pages/presentation pages/property showcases).
- Implemented a 'UI kit per project' approach: standardized components and styles, speeding up design and development.
- Optimized workflow in Figma: best practices, file structure, guides, and task scoring for prioritization — reduced time on iterations and handoff.
- Increased conversion rates of existing products through benchmarking, marketing analytics, and improving key flows (lead generation/applications).

Key Competencies

Product Thinking

Came to design from digital marketing, so I design solutions considering business growth and marketing goals.

Working with Complex Data

Able to package sensitive data (HealthTech) and complex logic (Blockchain, Mining) into understandable secure interfaces.

Processes and Documentation

Use BPMN notation for process modeling, which helps synchronize design with stakeholders and development.

Research

Minimize subjectivity in design through qualitative research, usability testing, and session analytics.
